

Zimmer Introduces Chondrofix® Osteochondral Allograft for the Repair of Osteochondral Lesions

Feb 09, 2012

Technology Offers a Joint Preservation Solution for Younger, More Active Patients

SAN FRANCISCO, CA - February 9, 2012 - Zimmer Holdings, Inc. (NYSE and SIX: ZMH), a global leader in musculoskeletal health, today introduced *Zimmer*® *Chondrofix*® Osteochondral Allograft at the American Academy of Orthopaedic Surgeons annual meeting in San Francisco, CA.

Chondrofix Osteochondral Allograft is intended for the repair of focal osteochondral lesions in diarthrodial joints, using a single-stage procedure.

"*Chondrofix* technology offers an innovative new option for early intervention treatment of cartilage lesions through either an open or arthroscopic surgical procedure," said Cheryl R. Blanchard, PhD, Senior Vice President and Chief Scientific Officer at Zimmer. "The introduction of *Chondrofix* Osteochondral Allograft expands Zimmer's offerings across the musculoskeletal continuum of care. *Chondrofix* technology retains the mechanical properties of the pre-processed tissue, including the capacity for immediate load-bearing, making it ideal for patients seeking a joint preservation solution and who need to return to physical activity quickly following an injury."

Chondrofix Osteochondral Allograft is minimally manipulated using a proprietary process which results in viral inactivation and terminal sterilization. The product features a two year shelf life, allowing for off-the-shelf use in situations where a pre-operative MRI has not revealed the full extent of the injury. The technology is designed for patients with osteochondral lesions who are considered too young for a total joint replacement or who may need to reduce rehabilitation time to a minimum.

For more information about Zimmer's *Chondrofix* technology, visit the company at Booth 519 at the 2012 American Academy of Orthopaedic Surgeons annual meeting in San Francisco, or go to www.zimmer.com.

About Zimmer
