

Zimmer Holdings and ISTO Technologies Announce IND Approval for Neocartilage Graft

Jun 21, 2006

WARSAW, Ind. and ST. LOUIS, June 21, 2006 /PRNewswire-FirstCall via COMTEX News Network/ -- Zimmer Holdings, Inc. (NYSE: ZMH; SWX: ZMH), a leader in the orthopaedics industry, and ISTO Technologies, Inc., an innovative clinical stage orthobiologic company, today announced that the U.S. Food and Drug Administration (FDA) has approved ISTO's Investigational New Drug (IND) application for Neocartilage, a tissue-engineered living tissue graft designed to repair cartilage defects, restore joint function and relieve pain in the knee.

The IND approval allows the companies to move forward with human clinical trials of the novel cartilage regeneration treatment. The companies expect to receive approvals from individual clinical sites to proceed with initial implantations during the second half of this year.

Zimmer and ISTO entered into an agreement in 2002 granting Zimmer exclusive worldwide commercial distribution rights to Neocartilage, which was developed by ISTO. The two companies have since collaborated on further development and pre-clinical testing. Zimmer plans to market the product as DeNovo(R) ET Live Chondral Engineered Tissue Graft. The potential market for DeNovo ET is large, as approximately 500,000 cartilage lesions are treated in knee joints each year in the United States alone.

"We are delighted both to have been given the go-ahead by the regulatory authorities to advance Neocartilage into clinical development, and to be collaborating with the world's leading orthopaedic company to achieve this significant milestone," said Mitchell Seyedin, Ph.D., President and Chief Executive Officer of ISTO.

"Zimmer has made biologics the centerpiece of our innovative investment strategy and we are pleased to have continued our equity investments in ISTO and reached this very concrete milestone in the development of our plans," said Ray Elliott, Chairman, President and Chief Executive Officer of Zimmer Holdings.

Neocartilage is living tissue grown from juvenile chondrocytes (cartilage cells) using ISTO's proprietary cell-based platform technology. Studies have demonstrated that juvenile chondrocytes produce cartilage significantly better than their adult counterparts. ISTO's patented technology allows expansion of these cells and the creation of a tissue graft while maintaining both their functional and repair capacities.

Cartilage works as a low friction articulating surface to protect joints from wear and tear experienced during motion. This articular cartilage can be damaged as a result of injury, or can simply deteriorate over time. Degeneration of cartilage in joints often leads to osteoarthritis as cartilage has limited capability to heal on its own. Most joint replacements are performed as a result of the effects of osteoarthritis.

About Zimmer

Founded in 1927 and headquartered in Warsaw, Indiana, Zimmer is the worldwide #1 pure-play orthopaedic leader in designing, developing, manufacturing and marketing reconstructive and spinal implants, trauma and related orthopaedic surgical products. Zimmer has operations in more than 24 countries around the world and sells products in more than 100 countries. Zimmer's 2005 sales were approximately \$3.3 billion. The Company is supported by the efforts of more than 6,700 employees worldwide.

About ISTO Technologies, Inc.

ISTO Technologies, Inc. is a clinical stage orthobiologic company focused on developing differentiated products for sports medicine and spinal therapy. ISTO's products are intended for repair and regeneration of damaged cartilage in joints and spinal discs.
