

Zimmer Biomet Announces FDA Clearance and First Surgical Case of the Persona® Trabecular Metal™ Tibia

Apr 16, 2018

Clearance of the Persona Trabecular Metal Tibia Allows Zimmer Biomet to Provide a Fully Cementless Total Knee Solution

WARSAW, Ind., April 16, 2018 /PRNewswire/ -- Zimmer Biomet Holdings, Inc. (NYSE and SIX: ZBH), a global leader in musculoskeletal healthcare, today announced the completion of the first surgical case utilizing its Persona® Trabecular Metal™ (TM) Tibia by Dr. Richard Moore, Boise, Idaho on March 20, 2018. The Persona Trabecular Metal Tibia received 510(k) clearance from the U.S. Food and Drug Administration (FDA) in January 2018 and CE Mark approval in April 2018. The Persona TM Tibia is an integral component of the Company's portfolio of cementless total knee arthroplasty (TKA) solutions.

"Combined with the Persona TM Femur and the TM Patella, clearance of the Persona TM Tibia allows us to provide a fully cementless total knee solution, furthering our long-standing commitment to enhancing patient experiences and outcomes," said Dan Williamson, Zimmer Biomet's Group President, Joint Reconstruction. "We believe this innovative product will position us to re-establish our leadership in the fully cementless primary knee market."

Zimmer Biomet's proprietary TM Material is a porous biomaterial made from elemental Tantalum with structural, functional and physiological properties similar to cancellous bone.¹⁻³ With more than 20 years of clinical results, the Company's TM Material has been used in over two million orthopaedic devices.

"The clearance of the Persona TM Tibia represents a significant step forward for those patients who can benefit from completely cementless total knee replacements that better integrate into the natural bone anatomy for durability, while possibly offering greater patient satisfaction," said Dr. Moore.

The Persona TM Tibia features new drilling, sizing and insertion instrumentation that are unique to the Persona TM Tibia, while preserving all the anatomic benefits of the Persona Tibia design.⁴⁻⁸ The Persona TM Tibia is another example of how the Persona System continues to redefine personalization by combining Zimmer Biomet's 20-year porous fixation expertise with the Persona Knee family. As the Company's most comprehensive knee system, the Persona System offers more anatomically accurate components with finer increments to personalize patient fit and restore the unique identity of every knee.

"The TM tibial tray and pegs fit beautifully to the bone. I believe the instruments for trial prep and implant placement were a clear improvement and an advantage. I also appreciate the time efficiency of using cementless implants," concluded Dr. Moore.

Zimmer Biomet plans a limited launch of the Persona TM Tibia in the first half of this year, followed by a full commercial launch in the second half of 2018.

About Zimmer Biomet

Founded in 1927 and headquartered in Warsaw, Indiana, Zimmer Biomet is a global leader in musculoskeletal healthcare. We design, manufacture and market orthopaedic reconstructive products; sports medicine, biologics, extremities and trauma products; office based technologies; spine, craniomaxillofacial and thoracic products; dental implants; and related surgical products.

We collaborate with healthcare professionals around the globe to advance the pace of innovation. Our products and solutions help treat patients suffering from disorders of, or injuries to, bones, joints or supporting soft tissues. Together with healthcare professionals, we help millions of people live better lives.

We have operations in more than 25 countries around the world and sell products in more than 100 countries. For more information, visit www.zimmerbiomet.com or follow Zimmer Biomet on Twitter at www.twitter.com/zimmerbiomet.
