

Zimmer Launches CR Version of High-Flexion Knee for Patient Lifestyles Design Permits Up to 155 Degrees Range-of-Motion

Dec 03, 2003

WARSAW, Ind., Dec 03, 2003 /PRNewswire-FirstCall via Comtex/ -- Zimmer Holdings, Inc. (NYSE: ZMH) (SWX: ZMH) today announced that it has fully launched the NexGen(R) CR-Flex Fixed Bearing Knee, a system designed to provide a greater range of motion for patients who require deep bending for recreational, religious or other day-to-day activities. For patients who have the ability and desire to resume such high-flexion after a total knee replacement, the system can accommodate a range of motion up to 155 degrees.

According to the company, the NexGen CR-Flex Fixed Bearing Knee System is differentiated from other "high-flexion" systems in that there are new "minus" sized femoral components that give the surgeon an additional tool to balance the soft tissue ligaments without cutting additional bone. Zimmer has applied for patent protection on this "minus" size femoral concept.

In 2001, Zimmer released a similar product, the NexGen LPS-Flex Fixed Knee, and a mobile-bearing version that is sold outside of the US. The new CR (Cruciate Retaining) version will enable surgeons who prefer a CR design to offer patients a high flex knee. More than half of all of knee replacements worldwide are performed using CR systems. Previously, Zimmer's LPS-Flex design addressed only the requirements of surgeons who prefer a Cruciate Sacrificing, or Posterior Stabilized (PS), system. Zimmer will position the CR-Flex and the LPS-Flex as the products of choice for CR or PS surgeons, depending on their preference, for both open and minimally invasive surgical approaches.

"Our dramatic growth worldwide in joint reconstruction systems is due in part to our philosophy of enhancing patient lifestyles in addition to relieving pain and restoring function," said Zimmer Chairman, President and CEO Ray Elliott. "This launch expands our ability to respond to the majority of surgeons who prefer CR designs, enabling them to bring the benefits of the Zimmer Flex to their patients."

According to Dr. Kim Bertin, a Salt Lake City, Utah, orthopaedic surgeon who worked with Zimmer to develop this new design, a number of features will benefit patients who are seeking a return to greater flexion. "With a cruciate retaining design, a surgeon must be able to balance the tension on the ligaments and tendons that holds the knee in proper alignment," Dr. Bertin said. "The NexGen CR-Flex allows the surgeons to achieve soft-tissue balancing without the need to make additional bone cuts or ligament releases. Coupled with improved kinematics throughout the range of motion, this design can easily accommodate up to 155 degrees of active flexion."

Founded in 1927 and headquartered in Warsaw, Indiana, Zimmer is the worldwide pure-play leader in the design, development, manufacture and marketing of reconstructive orthopaedic, spinal and dental implants, trauma products and related orthopaedic surgical products. Zimmer has operations in more than 24 countries around the world and sells products in more than 80 countries. In October, 2003, the company finalized its acquisition of Centerpulse AG, a Switzerland-based orthopaedic company and the leader in the European market. For the year 2002, the worldwide combined revenues of Zimmer and Centerpulse were approximately \$2.2 billion, supported by the efforts of nearly 7,000 employees.
